

# ECOWOODOIL<sup>®</sup>

SUSTAINING TIMBER

An ORGANOIL Product

*“Natural”*

## WOODWIPE

Since the beginning of man wood has been shaped into utensils, bowls & chopping blocks.

Wood is practical, easily shaped and less likely to feed and hold bacteria. However, constant washing of wood has a tendency to soften the surface tissue and raise the fibres of the timber. - Therefore, it is necessary to regularly nourish or feed the timber to prevent this.

Many oils used today by the home cook like Olive, Grape seed, Canola or mineral oils and other cooking oils are classified as non-drying oils and can promote mould growth, gradual darkening of the timber, as well as leaving a sticky surface that attracts dust and dirt.

Drying oils like Tung Nut Oil cure under oxidisation (air) within the structure of the timber and is more resilient to water and alcohol and less likely to promote mould growth or go rancid.

Ecowood Oils' **“WOODWIPE”** has been specifically formulated from a blend of Nut\* & Citrus Oils to create a drying oil that will maintain Wooden items that frequently come in contact with food and water. A simple wipe on/wipe off application is all that is required to keep your timber pieces nourished, looking their best and feeling good to the touch.

### THIS PRODUCT IS FOOD SAFE

\*Tung Nut Oil in this product is “cold pressed” from the seeds of fruit from the Tung Nut Tree, these are not legumes i.e., peanuts which are the usual cause of allergic reactions in some humans (Always use according to instructions)
